

AI ACADEMY

ADAPTIVE

SOLUTIONS & ADVISORY GROUP

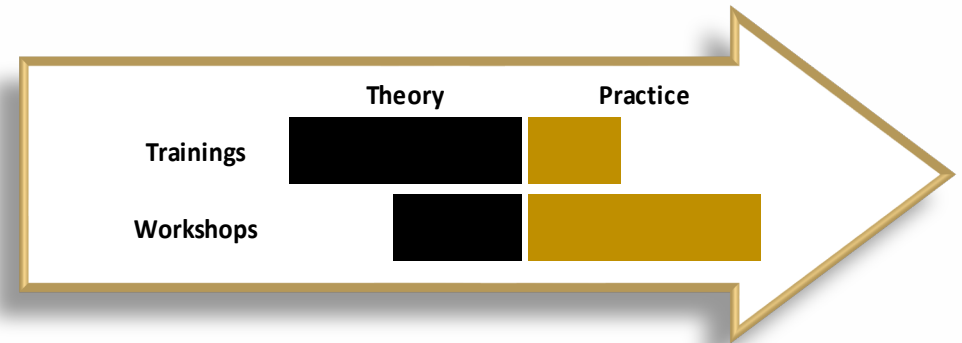

AI MATURITY JOURNEY ADDRESSED BY OUR ACADEMY

ADAPTIVE OFFER

ADAPTIVE GROUP is offering comprehensive support to prepare and conduct a series of **AI training sessions** for operational teams and line managers.

- On the basis of a detailed agreement, we would deploy **two highly-skilled AI professional trainers** for the project planning and execution. First project phase would consist of a proper assessment of **[client's]** training needs which will result in tailoring the detailed training content and conduct learnings sessions at your location.
- We intent to start with review of training content with **[client's]** organization to agree on final shape of the training(s).
- Then we propose to provide a mixture of Basic AI with Intermediate training and AI Practice Lab:
 - First learning session consisting of the **Basic AI** topic introducing **[client's]** Team into AI fundamentals.
 - Second training round would be much more “hands on” **AI Practice Lab**.
 - These two might be followed by a hands-on **Workshop** session with selected participants in “AI hackathon” mode.

All training content related to prompting and use of Large Language Models (LLMs) **is interface agnostic**, and knowledge can be applied in **ChatGPT, MS Copilot, Claude, Google AI Studio and any other LLM** interface both either as closed or open source.

We also can provide a **MS Copilot focused trainings**, however this might affect the pricing (to be discussed with **[client]**).

BASIC AI TRAINING

max. 20 participants

8 hours (including breaks)

I. Opening → 20 mins.

- a. Explain the AI learning journey, set expectations

II. What are LLMs, and what are they not? How do they work? → 90 mins

- a. Practical explanation of what LLMs are and what they are not
- b. Why LLMs predict rather than “know”
- c. What tokens and context windows mean in practical business work
- d. Why hallucinations happen and how to work around them
- e. Why clear instructions, source boundaries and verification matter

III. Prompting as requirements engineering + exercises → 120 mins.

- a. Why prompting should be treated as structured business briefing
- b. How to define context, task, constraints and expected output
- c. How to include assumptions, quality criteria and acceptance criteria
- d. How to ask AI to challenge, improve or clarify the prompt before answering

IV. Safe and reliable AI use in business → 45 mins.

- a. Practical rules for using business data, documents and examples safely
- b. How to anonymize, simplify or replace sensitive information with synthetic data
- c. Treat AI output as draft
- d. Verifying AI output and identifying weak answers

V. From Prompting to AI-Assisted Workflows → 60 mins.

- a. Moving from one-off prompts to repeatable work routines
- b. Create / transform / review-improve patterns
- c. Reliable loop: brief → generate → critique → revise → finalize
- d. Exercise: design one reusable pattern for recurring business work

VI. Utilizing AI in Building Threats for Cybersecurity → 45 mins.

- a. Examples of How AI Can Be a Threat to Organizations
- b. Prompt Injection deep-dive.
- c. Hacking LLMs (jailbreaking)

VII. Summary + Q&A / Takeaway Inspiration. → 30 mins.

AI PRACTICE LAB

max. 15 participants

8 hours (including breaks)

I. Opening → 20 mins.

- a. Explain the AI learning journey, set expectations

II. High-value business use cases of AI interfaces → 120 mins

- a. From notes/data to business outputs: reports, presentations, proposals and summaries created faster with AI.
- b. Meeting and productivity support: meeting facilitation, transcriptions & problem solving
- c. From raw input to structured assets: dashboards, process flows, visual outputs and simple apps created from natural-language prompts.

III. From assistants to workflows to agents → 45 mins.

- a. Building AI „lite” Assistans with LLMs
- b. Overview of assistant across various AI (ChatGPT, Claude, Gemini, etc.)

IV. When to go beyond Copilot: other AI building tools → 30 mins.

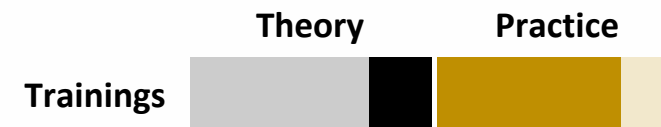

- a. Google AI Studio
- b. Replit Agent 4
- c. Lovable
- d. v0

V. Hands-on build lab: automate real work with AI → 135 mins.

- a. From brief → automation spec
- b. VBA build
- c. Python script build
- d. Using AI Coding agents (Codex, Claude Code, Jules, etc.)

VI. Summary + Q&A / Takeaway Inspiration → 30 mins.

- a. What can you do tomorrow to better leverage AI than you did yesterday?
- b. Practical Checklists
- c. List of useful tools and resources.
- d. Quick showcase: 3-4 people demonstrate what they have built.

AI PRACTICE LAB – MS COPILOT

max. 15 participants

8 hours (including breaks)

I. Opening → 20 mins.

- a. Explain the AI learning journey, set expectations

II. High-value business use cases of AI interfaces → 120 mins

- a. From notes/data to business outputs: reports, presentations, proposals and summaries created faster with AI.
- b. Meeting and productivity support: meeting facilitation, Loop-assisted collaboration, problem solving with Copilot
- c. From raw input to structured assets: dashboards, process flows, visual outputs and simple apps created from natural-language prompts.

III. From assistants to workflows to agents → 45 mins.

- a. Turning natural language to Workflows
- b. Building AI „lite” Assistants with MS Copilot
- c. Overview of Copilot Studio

IV. When to go beyond Copilot: other AI building tools → 30 mins.

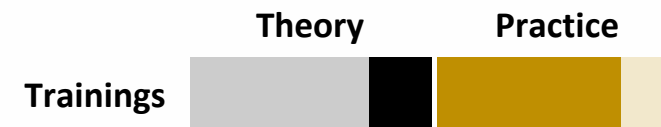

- a. Google AI Studio
- b. Replit Agent 4
- c. Lovable
- d. v0

V. Hands-on build lab: automate real work with Copilot → 135 mins.

- a. From brief → automation spec
- b. Copilot-driven VBA build
- c. Copilot-driven Python script build
- d. Copilot-driven Power Automate flows

VI. Summary + Q&A / Takeaway Inspiration → 30 mins.

- a. What can you do tomorrow to better leverage AI than you did yesterday?
- b. Practical Checklists
- c. List of useful tools and resources.
- d. Quick showcase: 3-4 people demonstrate what they have built.

SUPPORT MODEL & COMMERCIALS

- ✧ **ADAPTIVE GROUP** project team will consist of a dedicated **two highly-skilled AI professional trainers**. This approach ensures access to the right skillset and experience required to deliver the trainings.
- ✧ As outlined in our offer, we can deliver trainings as standalone sessions tailored to **[client's]** needs:
 - ✧ **Basic** for group(s) of 15-20 participants;
 - ✧ **Practice Lab** for group(s) of max. 10 participants;
 - ✧ **Workshop (AI Hackathon)** for group(s) of max. 10 participants.
- ✧ We strongly recommend that selected employees should go through 'Basic → Intermediate → Workshop' sequence to achieve appropriate pacing and solid comprehension of the material.
- ✧ These trainings would take place at client's location, however for Transparency on-line cost of training is presented as well. Workshop mode is available only in 'on-site' mode.

Training name	On-line	On-site (in Poland)
Basic AI training	€ 3 000	€ 3 300
AI Practice Lab	€ 3 300	€ 3 750
Workshop (AI Hackathon)	–	€ 3 750

- ✧ Microsoft Copilot focused training uplift +200EUR per session.
- ✧ Pricing is provided per each 8-hour training session. Trainings can be delivered in English or Polish, according to the client's preference. All training materials will be prepared in English.

* Above mentioned rates are excluding taxes and T&E expenses. In case of on-site training at Client's premises outside Poland, the on-site will be increased by T&E expenses (transport & accommodation) and will be added to respective billing as a recharge based on actuals or confirmed estimates.

ADVANCED VBA TRAINING PROGRAM

02

VARIOUS AI TRAINING PROGRAMS

ADAPTIVE OFFER

TRAINING APPROACH & TIMELINE

- ✧ We offer a **2-days, practical Excel VBA training for beginners**, helping employees automate everyday tasks and work more efficiently in Excel.
- ✧ We propose below training areas to build a foundational understanding of how macros work and how to start using them. Final training content & agenda can be adjusted to the Client's expectations and needs:

1

Introduction to VBA and the Macro Recorder

2

VBA Editor, basic syntax and variables

3

Working with worksheets, ranges and data

4

Loops, debugging and simple error handling

5

Using AI tools to generate and refine VBA code

Methodology

- ✧ short theory blocks
- ✧ step-by-step coding exercises
- ✧ AI suport for code creation

ADAPTIVE OFFER

TRAINING AGENDA – DAY 1

START	END	MODULE	TOPICS
09:00	10:30	1. Introduction to VBA & First Macro	Course objectives; where VBA adds value beyond standard Excel; enabling the Developer tab and macro security; recording a first macro; running macros from buttons/shortcuts; brief "before/after" automation demo.
10:30	10:45	COFFEE BREAK	
10:45	12:15	2. Working with Recorded Macros & VBE Basics	Opening recorded macros in the Visual Basic Editor; structure of a Sub; reading recorder-generated code; basic clean-up (remove redundant lines, add comments, tidy indentation); running macros from the VBE and from Excel.
12:15	13:15	LUNCH BREAK	
13:15	14:45	3. Writing Simple Procedures & Variables	Creating procedures from scratch; statements and code blocks; comments and indentation; using MsgBox and InputBox; Option Explicit and why forcing variable declarations matters; key data types (Variant, Long, String) and variable declarations; simple expressions and calculations.
14:45	15:00	COFFEE BREAK	
15:00	16:00	4. Excel Object Model Basics	Overview of the Excel object model (Application → Workbook → Worksheet → Range); addressing cells and ranges (A1 notation, Cells, named ranges, other sheets); using With...End With; basic If...Then;

ADAPTIVE OFFER

TRAINING AGENDA – DAY 1

START	END	MODULE	TOPICS
09:00	10:30	5. Recap & Simple Loops	Structured recap of Day 1; review and refinement of a sample macro; introduction to For...Next loops over rows and columns; using loops to replace repetitive table operations.
10:30	10:45	COFFEE BREAK	
10:45	12:15	6. Loops in Practice & Debugging Basics	Using For Each for ranges; common loop patterns for processing datasets; core debugging tools: step-through , breakpoints, Debug.Print; interpreting typical beginner error messages.
12:15	13:15	LUNCH BREAK	
13:15	14:45	7. Guided Mini-Project	Applying macros and loops to a compact real-life scenario; defining processing steps in plain language; reusing and combining earlier code; adding simple custom checks or formatting rules.
14:45	15:00	COFFEE BREAK	
15:00	16:00	8. Using AI as a Helper & Wrap-Up	Using AI tools to support VBA work; writing clear prompts for explanations or minor code improvements; handling sensitive data safely; reviewing and testing AI-suggested changes; asking for explanations of existing code; summary of key takeaways

01

ADVANCED VBA TRAINING PROGRAM

02

VARIOUS AI TRAINING PROGRAMS

TAILORED FOR MANAGERIAL TEAM

2 days x 6hrs

I. AI in SSC/GBS – context, definitions, decisions for management (covers: 1, 2, 5)

- a. Short structuring of concepts: AI, ML, Deep Learning, language models (LLM) – without technical overload, with GBS examples.
- b. AI vs ML vs automation (RPA / workflow).
- c. Key AI trends in service centres.

II. How AI works in a nutshell + examples in SSC/GBS (covers: 2, 4, 5)

- a. How AI “thinks”: pattern recognition vs “real understanding”
- b. Main types of business applications
- c. Examples from SSC/GBS

III. Data and processes – the foundation of every AI project (covers: 3, 4, 5)

- a. Data as the foundation of AI
- b. How to assess data quality in the organisation from a manager’s perspective.
- c. Impact of data quality on model effectiveness: concrete “garbage in – garbage out” examples in F&A, HR, SCM processes
- d. Identifying processes for optimization

IV. How to start implementing AI + how to talk to AI vendors (covers: 5, 6)

Part A – Implementation playbook:

- a. From problem to pilot: steps, roles, cooperation with IT/BI.
- b. Alternatives when global IT support is weak (SaaS, PoC with a partner, no/low-code)
- c. KPIs for AI projects

Part B – What to pay attention to in conversations with AI vendors:

- a. What happens with our data?
- b. How does the vendor verify solution quality and stability?
- c. What exactly are we paying for – now and at scale?
- d. How dependent are we on the vendor (lock-in)?

V. AI team / working group – how to choose the right people (covers: 7)

- a. Criteria for selecting members of an AI working group
- b. Key roles
- b. Diversity of perspectives: locations, seniority levels, age
- c. Preparing the group for the role of AI promoters

VI. AI Agents vs classic workflows – the next level of automation (covers: 8)

- a. What AI Agents are
- b. Differences vs traditional workflow / RPA
- c. Example agent scenarios in SSC/GBS (on a conceptual level)
- d. How to assess whether the organisation is ready

VII. Human aspect and communication – AI as support, not a threat (covers: 9)

- a. Typical employee concerns in SSC/GBS regarding AI and automation
- b. How to communicate AI
- c. How to build a culture of innovation
- d. How to assess whether the organisation is ready

VIII. Benefits, risks, ethics and regulation (AI Act) (covers: 5)

- b. Business benefits in numbers
- c. AI model risks
- d. Ethics and regulation – introduction to the EU AI Act
- e. How to build a simple risk and control matrix for AI projects in SSC/GBS

 Topics that go beyond the standard scope of the BASIC training

INTERMEDIATE with PRACTICE LAB

8 hours

I. Prompting Techniques and Tricks (Advanced techniques)

→ 60 mins.

II. Business Application: What Really Makes Sense? → 90 mins.

- a. Strategic Foundation: when to Build vs. Just Use ChatGPT/Copilot?
- b. Local models vs. cloud-based (including the Polish model “Bielik”)
- c. Utilizing multiple LLMs and interfaces for best results (Copilot, ChatGPT, Gemini)
- d. Building a solution using synthetic data (fake data).

III. What are AI agents, and how do they differ from classical workflows?

→ 90 mins

- a. Introduction to n8n (low-code app for designing AI workflows and Agents)
- b. Examples: AI as an assistant, analyst, report generator.
- c. RAG - What is it and how does it work?
- d. Web crawling AI agents

IV. BUILD SESSION: Production Documents, Presentations and apps

→ 45 mins.

Practical Exercises:

- a. Reports: From data/notes → formatted report (Word/PDF)
- b. Presentations: From Brief to Slide Deck (PowerPoint)
- c. Proposals: From template + inputs → custom proposal
- d. Dashboards: From data → Visual dashboard
- e. Process flows: From process description → Process flow
- f. Building simple apps very fast and very easy

V. Utilizing AI in Building Threats for Cybersecurity → 45 mins.

- b. Examples of How AI Can Be a Threat to Organizations.
- c. Prompt Injection deep-dive.
- d. Hacking LLMs (jailbreaking)

VI. Summary + Q&A / Takeaway Inspiration → 30 mins.

- b. What can you do tomorrow to better leverage AI than you did yesterday?
- c. Practical Checklists.
- d. List of useful tools and resources.
- e. Quick showcase: 3-4 people demonstrate what they have built.

ADVANCED AI WORKSHOP

TBD (1 day min.)

I. When and Why to Go Beyond No-Code → 45 mins.

- a. Cost vs. Complexity vs. Control

II. Replit Deep Dive - Building Applications → 180 mins.

- a. **Part A:** Understanding Replit
 - i. How Replit Environment Works
 - ii. Agent 3 Capabilities: Apps vs Agents vs Workflows
 - iii. Deployment and Sharing
 - iv. Limitations and Pitfalls
- b. **Part B:** Build a Data Dashboard
- c. Open Build of an app defined by the group

III. Replit Agents & Workflows → 120 mins

- a. Agents vs Apps
- b. Build an AI Agent
- c. Build Your Own Workflow

IV. Beyond Replit - Tool Ecosystem → 60 mins.

- a. bolt.new (Quick Demo: Build a Landing Page)
- b. Lovable (Quick Demo: Build a Dashboard)
- c. Factory.ai Droids (Quick demo: use specialised agents)
- d. v0 by Vercel (Quick demo: Build a UI component)

V. Production & Critical Topics → 90 mins.

- a. Error Handling & Edge Cases
- b. Testing & Evaluation
- c. Data & Security
- d. Sharing & Documentation
- e. Maintenance Realities
- f. Measuring Success

VI. FINAL: Showcase & Next Steps → 30 mins.

- a. 5-6 people demonstrate what they have built (3 minutes each)
- b. Discussion on Encountered Challenges
- c. Q&A

	Theory	Practice
Workshops		

BASIC AI TRAINING with PRACTICE LAB

8 hours

I. What are LLMs, and what are they not? How do they work? → 45 mins.

- a. What does it mean that a model "is trained on textual data"?
- b. Tokens and context windows – why is it important to know about them, and how do they affect the quality of responses?
- c. Hallucinations: Where Do They Come From, How to Recognize Them, and How to Limit Them?
- d. Why do LLMs "not know," only predict – and how does this affect their use?

II. Prompting Techniques and Tricks + Exercises → 120 mins.

- a. What is a "prompt" and how does its form affect the response?
- b. "Context is king" – The essence of situational context in prompting.
- c. Examples of prompting.
- d. Model self-assessment: how to encourage an LLM to reflect.
- e. Building prompts with AI – from basics to advanced development.
- f. Use of scales, metrics, and evaluations.
- g. Deep Research in multiple installations (ChatGPT, Perplexity).

III. Utilization in Business → 60 mins.

- a. Do you always need the best model? (No!)
- b. GDPR and LLMs: Where is the boundary, and how to respect it?
- c. Problem solving with Copilot (exercise)

III. BUILD SESSION → 120 mins.

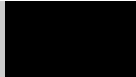

Practical Exercises:

- a. Reports: From data/notes → formatted report (Word/PDF)
- b. Presentations: From Brief to Slide Deck (PowerPoint)
- c. Proposals: From template + inputs → custom proposal
- d. Dashboards: From data → Visual dashboard
- e. Process flows: From process description → Process flow
- f. Building simple apps very fast and very easy

III. Utilizing AI in Building Threats for Cybersecurity → 45 mins.

- a. Examples of How AI Can Be a Threat to Organizations.
- b. Prompt Injection deep-dive.
- c. Hacking LLMs (jailbreaking)

IV. Summary + Q&A / Takeaway Inspiration. → 30 mins.

	Theory	Practice
Trainings		

INTERMEDIATE with PRACTICE LAB

8 hours

I. Copilot in Excel — FP&A use cases and exercises → 120 mins.

- a. Data shaping
- b. Formula engineering with verification
- c. Analysis workflow: variance story + driver hypotheses

II. Automations & workflows with Power Automate + Python → 120 mins.

- a. Workflow patterns that don't break in production
- b. Power Automate exercise: business-grade flow
- c. Python as a “glue layer”

III. Reliability & quality control → 30-45 mins.

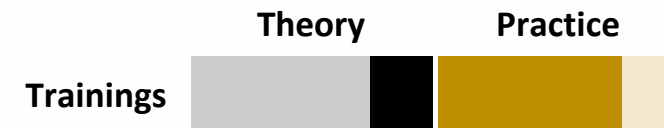

- a. Acceptance criteria for AI outputs
- b. Test harness mindset
- c. Prompt/version management

IV. BUILD SESSION: using Copilot to build automations (VBA focus) → 120 mins.

- a. From brief → automation spec
- b. Copilot-driven VBA build
- c. Debug + harden for production
- d. Build a macro: one-click workflow

V. Summary + Q&A / Takeaway Inspiration → 30 mins.

- a. What can you do tomorrow to better leverage AI than you did yesterday?
- b. Practical Checklists.
- c. List of useful tools and resources.
- d. Quick showcase: 3-4 people demonstrate what they have built.
